Replacement Leaf springs are one of the many suspension parts we specialize in. Since 2006 we have been selling and installing leaf springs for every type of truck, SUV, trailer and motorhome you can imagine. Your leaf springs are a very important part of your suspension and the ride quality you experience.

Over time, the steel in your leaf springs can fatigue or crack. This will cause you vehicle to sag lower than the original designed ride height. Worn leaf springs can also cause your truck to lean to one side. Replace your old leaf springs and get back your ride height and weight capacity. We stock OEM quality leaf springs from various manufacturers.

Steering repair and maintenance

Beyond providing a comfortable and enjoyable ride, these components help make sure your vehicle’s handling is secure. A properly maintained steering wheel and suspension system keep you in control of your vehicle. The suspension system, including your shock absorbers or struts, coil springs and linkage, helps support your vehicle’s weight and helps keep your tires in contact with the road. Visit your local Quick Lane, and our factory-trained experts can make sure your vehicle’s systems are functioning properly.

Maintenance includes:

- Inspection of all system components
- Check and top-off of power steering fluid
- Ball joint lubrication

Advantages of Motorcraft Shocks and Struts

- Reduce wheel bounce, helping provide a smooth ride
- Provide consistent control
- Full range of products for almost every vehicle application and driving situation
